

INTELLIGENT 3D VISION SENSORS

PRODUCT PORTFOLIO

PEOPLE-COUNTING, PATH DETECTION,
SECURITY AND MORE

INTENTA 3D-VISION TECHNOLOGY

Our Intenta 3D Vision smart sensors are based on state-of-the-art stereovision technology. By using two lenses, a three-dimensional view of the environment is generated. This principle is comparable to human vision. Based on height information, people can be detected very precisely and their walking paths can be tracked over large areas. This image data is processed in real time directly on the sensor. Our sensors can thus provide event data for downstream analysis without transmitting camera images. As such they meet all the requirements of the General Data Protection Regulation (DSGVO & GDPR).

APPLICATIONS

RETAIL

Optimize retail - Intelligent store analysis through people counting, walkway detection and dwell-time measurement.

EVENTS

Large-scale and precise visitor counting at trade fairs and large events - even with dense groups of people.

TRAVEL

Efficient people flow management and employee utilization through people tracking and counting in airports and train stations.

SMART BUILDINGS

Data for smart building control - easy integration of 3D sensor technology for smart building management.

SECURITY

Detect conspicuous behavior in real-time and keep an eye on the flow of people in security-critical areas.

HEALTH

Reliable personal protection in radiation therapy has been guaranteed for years by our PerMon prevent safety system.

FUNCTIONS

PEOPLE-COUNTING

With the help of Intenta sensors, precise people-counting is possible, distinguishing between children and adults. In addition, information about the walking paths of the individual persons can be provided.

DWELL-TIME MEASUREMENT

Our sensors can measure the amount of time people spend in a freely definable area. For each individual person, it can be determined how long they stayed in which section of the room.

WAIT-QUEUE DETECTION

One application is the detection of long waiting times at checkouts, service counters or entrances. If the number of people or the dwell time is exceeded, automatic signaling can be used, for example, to request additional personnel to staff more checkouts. The sensors help to efficiently increase service quality.

PATH DETECTION

The intelligent networking of several sensors allows large areas to be analyzed. The paths of individual persons can thus be reliably tracked across multiple sensors. More details on multi-sensor tracking on page 8.

SCAN FOR OUR
FEATURE CLIP

OCCUPANCY MANAGEMENT

Record the number of people on site or at your event locations in real time. When the maximum level is reached, our system, in combination with PerMon xcount or other analysis software, automatically issues an alert for a targeted regulation of admission, allowing for more comfort and safety.

ACCESS MONITORING

Intenta sensors increase the security of an access control system by recording the number of people in the controlled area. The system automatically reports violations of security rules (e.g. more than one person, fast following or tailgating) and blocks access automatically. Image documentation of violations is possible.

WRONG-WAY DETECTION

Intenta sensors enable stable counterflow detection. Prohibited directions of movement are reliably detected in security gates at airports or other safety-critical areas.

UNUSUAL BEHAVIOUR

Our sensors reliably detect whether and how long people are in an area as well as what their posture is. Conspicuous behavior such as loitering or flash mobs is automatically detected. Thanks to 3D room monitoring down to floor level, even prone persons can be detected.

INTENTA S1000

OUR SPECIALIST FOR PEOPLE COUNTING

The Intenta S1000 people counter is an easy-to-integrate and also cost-effective solution with a focus on people counting and dwell time measurement. The functionality is based on proven algorithms and the stereovision principle of our Intenta S2000 multifunction sensor.

The Intenta S1000 is configured via an intuitive web interface. With a wide range of interfaces our sensors can be easily connected to subsidiary systems like an analytics software for an even more precise analysis of your customer footfall. Due to their high accuracy the sensors are providing reliable data for determining the absorption or conversion rate.

VARIANTS	MOUNTING HEIGHTS
INTENTA S1000-SLC	2,20M - 3,50M
INTENTA S1000-MC	2,50M - 5,00M

PEOPLE-COUNTING & OCCUPANCY MANAGEMENT

DWELL-TIME MEASUREMENT

WAIT-QUEUE DETECTION

HIGHLIGHTS

- ✓ At least 98% counting accuracy
- ✓ Remote Management
- ✓ Real-Time Data
- ✓ Concealed interfaces and protected optics
- ✓ Integrated mounting
- ✓ Multisensor tracking (MST) up to 9 sensors

INTENTA S2000

FULL FLEXIBILITY FOR INDIVIDUAL APPLICATIONS

The Intenta S2000 laid the foundation of our entire sensor product range. It is suitable for installations with high demands on individuality due to its wide range of mounting heights, diverse interfaces and analysis options.

INTENTA S2100 SECURITY

The Intenta S2100 security is a tamper-proof, tiltable housing variant with all the functions of the Intenta S2000 for use cases with high security requirements. Its installation height is the same as the Intenta S2000-MC.

HIGHLIGHTS

- ✓ Flexible mounting angle 0-45°
- ✓ Optional color video
- ✓ Digital inputs and outputs
- ✓ Optional security housing
- ✓ Multisensor tracking (MST) up to 9 sensors

VARIANTS

MOUNTING HEIGHTS

INTENTA S2000-SLC	2,20M - 3,50M
INTENTA S2000-MC	2,50M - 7,00M
INTENTA S2000-HC	4,00M - 10,00M
INTENTA S2000-SHC	5,00M - 12,00M

MULTISENSOR-TRACKING

LARGE-AREA MONITORING WITH FEW SENSORS

By connecting several sensors together to one combined grid it's possible to analyze the walking paths of individual persons over large areas. The combination of up to 9 sensors is possible, which ensures uninterrupted people tracking even in particularly large or difficult areas.

The arrangement of the sensors can be chosen at will, even with different mounting heights or as a combination of different sensor variants. The analysis options correspond to the complete range of functions of a single sensor. The configuration is done as usual via the sensor's web interface.

3D-VISION TECHNOLOGY

OPTIONAL HD-VIDEO STREAM

DSGVO / GDPR COMPLIANT THROUGH EMBEDDED DATA PROCESSING

PRECISE OPTICAL OBJECT DETECTION

STABLE AGAINST CHANGES IN BRIGHTNESS

YOUR BENEFITS

DEVELOPED AND
MANUFACTURED
IN GERMANY

INTENTA 3D-VISION SENSORS

The software and hardware of our sensors are developed and produced at our headquarters in Chemnitz, Germany. We therefore offer all solutions from a single source and can respond specifically to your wishes.

- + High accuracy, even in dense groups of people or crowded areas
- + Integration with manufacturer-independent platforms
- + Variable installation height (2.2m to 12.0m)
- + Easy installation and setup
- + Automatic calibration
- + Large area analysis through MST
- + Fail-safe update
- + Open interfaces for easy integration
- + Individual pre-configuration (Settings and Logo)
- + Sustainable through continuous feature upgrades

ABOUT US

MORE THAN 10 YEARS OF EXPERIENCE IN IMAGE PROCESSING AND STEREO VISION

Since 2011, we have been developing intelligent, optical 3D sensors. With the launch of the Intenta S2000 in 2014 and the realization of numerous customer projects, we have since been expanding our development, production and marketing of our stereo vision sensors. This sustainable development results today in a mature product portfolio with solutions for a wide range of applications.

RELIABLE PARTNER FOR YOUR INDIVIDUAL DEVELOPMENT

The production of our optical sensors as well as the development of their software and hardware is located at our headquarters in Chemnitz. This offers us the possibility to implement your individual demands in special customer developments. Don't hesitate to contact our sales team if you are looking for an individual development.

TWO LOCATIONS IN GERMANY

Under the banner of Intenta Holding GmbH, Intenta ARC GmbH from Chemnitz is joined by Intenta SEH GmbH in Hamburg, which primarily offers software engineering solutions with focus on image processing, data fusion and automotive software. If you are looking for an individual software development, you can find more information about these services on our website.

CONTACT INFORMATION

We will be happy to advise you on our products and customized system solutions:
